

NEW KNOB ON HINGED PLASTIC LIDS

Original Knob
82023

New Knob
81329

Effective immediately, Server is replacing the current knobs (82023) on clear hinged plastic lids with a less bulkier knob (81329). Except for the type of knob used, the plastic lids are unchanged in material or design. The transition to a new knob does not affect pricing. The following three lids will have the new knob:

- 80310 - Clear Plastic Hinged Lid for Standard Fountain Jars
- 87253 - Clear Plastic Hinged Lid for 1/9-Size Fountain Jars
- 83214 - Clear Plastic Hinged Lid for 2/3-Size Fountain Jars

The original knob (82023) will not be available for the three clear plastic lids, even on a special order basis. Stainless steel hinged lids will continue to have the original knob (82023). The new knobs can be laser engraved upon request but are available in black only. The new knobs on lighter-weight plastic lids will have the following advantages over the original style:

- Reduce knob weight by 60%.
- Lighter lid to reduce shock when lid is opened and closed.
- Lighter knob reduces the tendency for the lid to "self close" from gravity or a bouncing action caused by opening very quickly.

Original Knob (82023) on an 80310 Lid

New Knob (81329) on an 80310 Lid
