

## **FCSI The Americas Celebrates New Products in its Innovation Showcase**

FCSI The Americas is pleased to continue its partnership with the FCSI Educational Foundation in presenting the Innovation Showcase during the biennial conference in Austin, Texas August 24-26, 2020.

The Innovation Showcase is designed to recognize manufacturers whose commitment to research and development has resulted in a truly innovative product that is a clear leap forward for the foodservice industry. All FCSI The Americas Corporate member companies are eligible for participation. All entries were judged by a panel of foodservice consultants and the top ten products were chosen for inclusion in the Innovation Showcase. During the conference in Austin, Texas, August 24-26, consultant attendees will examine the entries and gather detailed information about each product. On the final day of the event, these attendees will cast their ballots to choose the FCSI Product of the Year.

UNOX is proud to announce that our EVEREO®, product has been chosen as a finalist in the 2020 Innovation Showcase. EVEREO®, the first ever “hot fridge” designed to preserve meals for days at serving temperatures. The unit’s patented technology allows foodservice operators to preserve cooked food at hot temperature and ideal humidity for up to 72 hours. Among benefits: no energy-intense cook-chill-regenerate processes, reduced handling labor, and virtually instant service time.

Foodservice Consultants Society International (FCSI) is a worldwide industry association that promotes professionalism in foodservice and hospitality consulting. Membership requirements are stringent and association members are recognized as industry experts. FCSI members offer a wide range of consulting services from concept development and feasibility studies to food safety, design and marketing, as well as operations and training. For more information about The Americas Division of FCSI, visit [www.fcsi.org](http://www.fcsi.org).
