

***Stack Up* Profitability with Fully Tempered Tumblers!**

Stack Up is the fastest growing tumbler line offered from Arcoroc. This collection was designed to surpass all other stacking tumblers by delivering key features that save money and time:

1. **Fully Tempered ware is five times stronger** than regular annealed ware. Lab tests conducted during the design and development of *Stack Up* show superior strength against all other stacking glassware – particularly in mechanical resistance.
2. **Upright Stacking is more hygienic** as opposed to rim down stacking or rim down pyramid stacking. *Stack Up* is designed to stack “deep” so upright stacking is secure, and the specially engineered design of the interior stacking ledge eliminates sticking during cooling.
3. **Eight hard working Capacities** in Rocks, Hiball DOF, and Cooler are offered - and more capacities are under development.
4. **Manufactured in the USA**, *Stack Up* is produced in our Millville, NJ factory. A 40 Million dollar investment in 2012 has transitioned our factory into the cleanest emissions glass factory on the planet – while providing over 1,500 jobs for hard working Americans.
5. **Samples** – contact your Cardinal Representative or cardinalsales@arc-intl.com to order samples today!
