

# Western PurClean™

The disinfection service from your trusted fumigation provider

Our work has been designated as an essential service by the Homeland Security Office and we will maintain our commitment of providing service to our customers. We are closely monitoring the current coronavirus (COVID-19) outbreak..

## Introducing Western PurClean™

In response to current health and safety concerns, Western Fumigation has added a powerful and effective disinfection treatment called PurClean™. Our treatment utilizes the disinfectant Vital Oxide which is rated as Toxicity Category IV, EPA's lowest toxicity rating, defined as "practically non-toxic and not an irritant". It contains no ozone-harming volatile organic compounds (VOCs) and is mild on skin, hard surfaces, and fabrics.

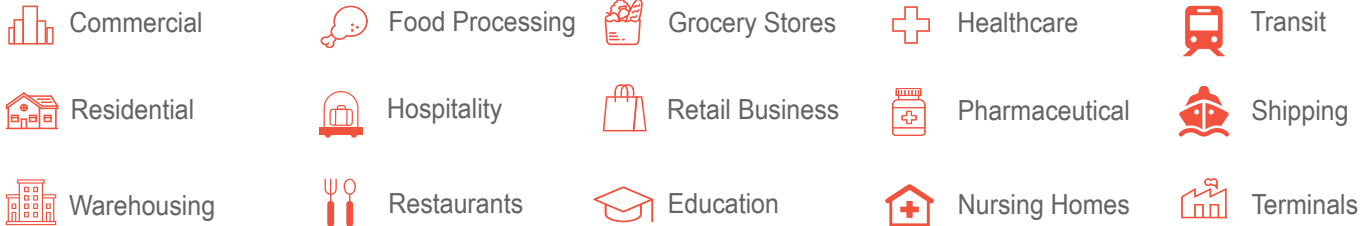

## The Benefits of Western PurClean™:

- ☑ Defined by the EPA as "practically non-toxic and not an irritant".
- ☑ Kills 99.99% of the almost 50 bacteria, fungi and viruses (as listed on the disinfectant label) on hard, non-porous surfaces and sanitizes soft, porous surfaces.
- ☑ Mild on skin, hard surfaces, and fabrics.
- ☑ No ozone-harming volatile organic compounds (VOCs).
- ☑ Included on the EPA's "List N" of products that meet their criteria for use against SARS-CoV-2, the causal agent of COVID-19.
- ☑ A 10x20 foot zone can be treated in approximately 30 minutes, which includes application and drying time

## Effective and Safe for All Industries

The Western PurClean™ Disinfection Service is effective in a wide range of applications to combat today's most difficult bacterial and viral challenges. All commercial facilities/industries and even homes can benefit from this disinfection service.

## How Does the PurClean™ Disinfection Service Work

Our Western PurClean™ disinfection service includes trained technicians carefully wiping down all high-touch surfaces in the treated area. They then mist the strong disinfectant using specialized equipment, and let it dry undisturbed, typically for 10 to 15 minutes.

**Wipe down treatment** – This application includes all inanimate human touch points, such as light switches, door handles, file cabinet drawer pulls, desk handles, etc. These areas will be treated with full-strength Vital Oxide using a microfiber wipe cloth.

**Light misting treatment** – After the wipe-down application to touch points, the entire space will be treated with a fine mist of the disinfectant to ensure that all other areas have been treated.

## PurClean™ – the disinfection treatment for peace of mind

Let us help you get back to business in a safer, healthier environment for you, your staff, and anyone who enters into your facility. You can open your doors knowing that you have had a top-notch disinfection treatment by the professionals at Western Fumigation.
